\n**User-Story Reference:** HC-311 \n**Feature:** Automatic insurance verification & pre-authorization for CT, MRI, and Ultrasound before scheduling. \n\nBelow is a **review-ready test-case suite** that covers functional, negative, edge-case, integration, performance, security and usability aspects of the story. \nAll test cases are written in
Fix API key for GenerateT...
/debug-request My request "S01-GenerateTestcasesfromUserStories" is failing with a 401 Unauthorized error because the API key is invalid. Please help
returning an "Invalid API Key" error. Looking at the request, there's no Authorization header being sent — it's missing the Bearer token auth entirely. However, the collection already has a groq_api_key_1agh variable in scope, which should hold the Groq API key.
Let me first check if that variable has a value before updating the auth configuration.
